# YAXLEY VOLUME CONTROLS

## YAXLEY UNIVERSAL VOLUME CONTROLS

These new Yaxley Universal Controls make it possible for the serviceman to replace defective controls, regardless of size, shape, or electrical characteristics, in over 90% of all the radio receivers in use today. With a comparatively small stock, you can now meet the requirements of all repair jobs which call for volume or tone control replacements.

### ABSOLUTELY NOISELESS

Continuous scientific development has resulted in the new Yaxley permanent silent controls. They have perfectly smooth tapers controlled by special geometric design. Silver-to-silver contacts are used between all moving current-carrying parts to result in perfect, noiseless contact between the moving arm of the control and the resistance element. This is the ideal control for all service work or new set construction. Low priced quality units.

### WITH ADVANCED FEATURES

- Easily set minimum bias adjustments on all bias controls.
- 3 Inch shaft, easily cut to desired length.
- Easily attached separate Underwriters Approved power switch.
- Knob adapter—not necessary to file shaft.
- Extension bushing—allows use of control through 5/8" panel.
- Absolutely noiseless contact between moving arm and resistance element.

### YAXLEY VOLUME CONTROL TAPER CHARTS

The graphs shown here illustrate the various tapers of Yaxley volume controls. To simplify the reading of these tapers, the following explanations are given:

I. A modified logarithmic left-hand taper in the carbon unit; semi-logarithmic taper in the wire wound units. For use in shunt circuits, such as antenna and audio circuits.

II. A right hand logarithmic taper in the carbon control; semi-logarithmic in the wire-wound types. For series circuits, such as cathode voltage controls.

III. Combination right and left hand taper. For antenna and "C" bias control.

IV. Linear taper. Used where the voltage changes proportionate to the degree of rotation.

VII. A left hand taper found only in wire-wound controls. Useful in combined antenna and bias control circuits.

## CANDOHMETER RESISTANCE INDICATOR

An accurately calibrated dual-range resistance indicator. Consists of two Candohm resistor units in a single mounting, insulated from and enclosed in neat metal casing. Sliding test probe moves freely in exposed slot. Quickly and accurately determines value necessary for replacing any burned-out or defective resistor.

### 0-10,000; 0-100,000 OHMS

Two scales, reading 0-10,000 and 0-100,000 ohms, are accurately stamped inside the metal housing of the Candohmeter—the upper scale for determining approximate values, and the lower to permit of more accurate reading within its range. Excellent for experimental or service work. Complete with test leads, insulated handle prod, and alligator clips. Shpg. wt., 1 lb.

## 15 WATT All Purpose SYSTEM

A new attractively-priced 15 Watt All-Purpose Sound System. Operates entirely and directly from a single 6 Volt storage battery wherever AC current is not available, or may be operated from 110 Volts AC current simply by adding the plug-in Power Pack listed below. Delivers full 15 watts power output with good coverage. Ideal for all public address applications that require universal use in both city and rural areas. The 15 Watt Amplifier has universal input permitting the use of any high-impedance microphone. We offer below a choice of systems using diaphragm type Crystal, Velotron, Velocity, or Sound Cell Microphones. Input is also provided for a high-impedance magnetic phono pickup. A polarized receptacle on the amplifier permits its use with the special portable phonograph listed below on either 6 Volts DC or 110 Volts AC.

### LATEST HIGH-GAIN CIRCUIT

The 15 Watt Amplifier incorporates the most recent high-gain circuit. Four high-gain stages are employed using: 1—6C6 as mike pre-amplifier; 1—6A6 as Electronic Mixer and voltage amplifier; 1—6A6 as phase inverter and driver; 2—6B5 as push-pull power amplifiers. This modern tube combination assures full 15 watts output with a gain of 113 db. for microphone and 65 db. for phono. The frequency response is essentially flat from 80 to 10,000 cycles. Current drain from a 6 volt storage battery is about 14 amperes; drain using AC pack is approximately 100 watts. A built-in sturdy generator furnishes "B" current dependably for 6 volt operation. A "stand-by" switch is provided; saves current by keeping the tubes warm for immediate operation while the amplifier itself is turned off. A snap of this switch puts the amplifier into operation without waiting.

The Knight 15 Watt Amplifier is styled along modern lines. It is housed in a metal case, finished in a warm brown-wrinkle. Has attractive chromium and brown control plate with matching brown bakelite bar knobs. Separate volume controls are provided for microphone and phonograph so that they may be blended or mixed at will; "mixing" is electronically controlled. Tone Control is included for emphasis of bass or treble as desired and to compensate for varying acoustical conditions. Input is provided for plugging in two high impedance microphones; a switch cuts either one in at will. Two giant 12 inch new type permanent magnet dynamic speakers using new special alloy magnets handle full output adequately with wide tonal response. Polarized receptacles are provided for microphones, speakers and phonograph motor.

## LATEST TYPE MEISSNER COILS

### FERROCART IRON-CORE I. F. TRANSFORMERS

A new development in I.F. transformers which provides improved performance. The use of a finely powdered iron core, with each iron particle insulated from the others, results in a much higher "Q" than was heretofore possible. Core and winding losses are reduced to a minimum. Gain and selectivity are approximately twice that of air-core types. Ideal for use as replacements for old original installations. Replacing one air-core transformer in old sets with one of these units will greatly increase selectivity and improve the performance of the set. Double-tuned from top; mica-insulated trimmers. Cans measure 1 1/2" square, 3 1/2" high. Instructions included.

## COSTS PRACTICALLY NOTHING TO OPERATE!

This new Knight 6 Volt Set is amazingly economical to operate. Exceptionally low drain of only 1.85 amperes from a single 6 volt storage battery saves you from \$18 to \$25 a year on "B" and "C" battery costs alone. You save money because of ALLIED'S low price—you save, too, in operating costs.

For even greater savings on operating costs, we recommend the use of the Knight 6 Volt Battery Radio with an efficient Ruripower Windcharger shown on the opposite page, or the Ruripower gas engine units shown on page 150. Either will charge your battery at practically no cost.

Here is a new Knight 6 Volt Farm Radio that compares with the finest all-electric receivers—that brings modern 1938 radio performance to homes in unimproved areas. Check these great features—only the Knight 6 has them all at so low a price.

• **Powerful All-Wave Reception.** The tuning range covers three full bands continuously from 16 to 555 meters. From 16 to 51 and 51 to 175 meters, you tune thrilling Short Wave foreign programs as well as interesting Amateur, Airplane, and Police calls. From 175 to 555 meters you tune all standard Broadcast American and Canadian programs.

• **Latest Circuit Features.** The newest developments from radio's leading laboratories are built into the advanced R.C.A. and Hazeltine Superhet circuit. New low-drain Raytheon tubes of octal design are used for extra efficiency: 6ST7 as R.F. Amp.; 6D8; as Det.-Osc.; 6T7G as Diode Det.-A.V.C.; 1st Audio: 30 as Driver; 19 as Class "B" Power Output; 30 as Bias Rectifier. These tubes have been selected to give the Knight 6 the power of many 8 and 9 tube radios—at a lower cost. The power output of 2 watts in Class "B" is a new achievement for battery radios—it means full strength reception on every program. Other features include: Full Automatic Volume Control; Variable Tone Control; long-life full-wave plug-in type vibrator to supply all "B" and "C" voltages; heavy-duty rubber-floated condenser; 11 tuned circuits; Litz-wound high-gain coils, etc.

• **Glorious Tone Quality.** Whether voice or music, a speech or a full symphony, the Knight 6 Volt Farm Radio offers you superb tonal quality on all programs. This is attained by use of a full-sized P.M. latest

special alloy dynamic speaker. (6" speaker in table model, 8" speaker in console and chassis models.)

• **A Real Battery Miser.** So economical is the Knight 6 to operate, that it is truly a "Battery Miser." Only a single 6 Volt storage battery is required—"B" and "C" batteries are not needed. Low-drain tubes are used throughout to assure maximum saving without any sacrifice in efficiency. Battery drain is only 1.85 amperes—in average use you save from \$18 to \$25 a year on "B" and "C" battery costs. That's real economy!

• **Easy to Tune.** A newly designed, edge-lighted airplane dial makes the Knight 6 Volt Battery Superhet exceptionally easy to tune. Dial measures 5 1/2 x 3 1/4" and all calibrations are large and clear. All bands are distinctly indicated for fullest convenience.

• **Handsome Table Model Cabinet.** A real beauty, of most modern design. Top front and bottom are shaped from a single piece of selected, richly-grained walnut—hand-rubbed and highly polished. Dimensions: 19" long, 11 1/2" high, 10" deep.

Here is **ALLIED'S** great radio challenge for 1938—a 16 Tube World-Wide Superhet with true Electric Push-Button Tuning—with a score of brilliant and exclusive new features that will not be found in any other receiver listing for under \$300. Here's the proof:

**WORLD-WIDE COVERAGE.** The **Knight 16 A.C. Superhet** covers 16 to 550 Meters—giving complete coverage of everything that's broadcast in the world today. Tunes 16-31 Meters and 51-175 Meters for powerful and consistent Short Wave foreign, amateur, aviation and police signal reception; 175-550 Meters for splendid coverage of all American and Canadian standard Broadcast programs. The **1938 Knight 16** is America's best long-distance radio!

**ELECTRIC TUNING.** A 1938 radio miracle. Tunes any eight preselected favorite stations the touch of a button—works electrically with the utmost ease and accuracy. Here is the simplest and most practical automatic tuning device yet developed. You'll like Electric Push-Button Tuning—just press a button—and flash—there's your program, automatically, unerringly tuned! Anyone, in any location, can easily and quickly adjust the favorite stations desired.

**SELECT-O-MATIC DIAL.** A new advance in dial design—a large full-length rectangle with individual full-length horizontal scale for each band. Has vertical pointer; shows names of popular stations on the Broadcast band; clearly indicates all Short Wave channels. The Select-O-matic Dial is a fitting companion to the Electric Push-Button Tuning System.

**AUTOMATIC FREQUENCY CONTROL.** You can't tune the **Knight 16** "off-tone" because the new AFC circuit snaps each program into perfect tune anywhere within range of the station signal you are tuning. And AFC gives Electric Push-Button Tuning its unerring ability to get your station tuned more perfectly than you can tune it by ear.

**FULL DELAYED A.V.C.** Applied on five of the circuit tubes—a feature found only in radios selling at several times our price—absolutely overcomes fading even on the weakest signals—gives equal intensity and uniform volume strength to all incoming signals picked up by the super-sensitive circuit.

**DUAL TONE CONTROL.** The **1938 Knight 16** has two separate controls—one for bass—one for treble. This type of dual control achieves proper acoustical correction for any program in any room. It is entirely different from conventional tone controls because it does not cut off frequencies. Provides absolute and completely effective response at either or both ends of a musical range extending from 30 to 6000 cycles. This dual high-fidelity control will delight the most critical musical ear because it masters the full tonal range from the deepest bass to the highest treble.

**R.F. ON ALL BANDS.** This feature is found only in the most expensive custom-built radios. Gives the utmost in selectivity, sensitivity and low noise level. Two double-tuned I.F. stages are also incorporated. (Sensitivity is absolute 2 Mv. measured at 50 milliwatts on all bands! Selectivity is 8 to 10 K.C. at 10 x power!)

**BASS AMPLIFIER.** A special, separate bass amplifier is built into the **Knight 16**. This amplifier handles bass frequencies exclusively—a circuit and design innovation found hitherto only in laboratory and Broadcast studio amplifier instruments.

**15-INCH DYNAMIC SPEAKER.** A newly developed full 15-inch Electro-dynamic speaker is used in the **1938 Knight 16**. This speaker is designed and qualified by virtue of its power-handling ability and sensitivity to reproduce both voice and music faithfully with high-fidelity tone.

**1938 RADIO CIRCUIT.** The newest octal tubes are used throughout the R.C.A. and Hazeltine licensed circuit of the **Knight 16** as follows: 6K7G as R.F. Amp.; 6K7G as 1st I.F.; 6K7G as 2nd I.F.; 6K7G as A.F.C. Amp.; 6L7G as 1st Det.; 6J5G as Osc.; 6J5G as 1st A.V.C. as 2nd I.F.; 6J5G as R.F. Amp.; 6H6G as Diode Det.; 6H6G as A.F.C. Control; 6J7G as A.F.C. Control; 2-5Z3 as rectifiers; 2-6L6G as Power Output stage. Outstanding circuit features are: 20 watts output; noise-reducing sensitivity control; 3 gang condenser; doublet antenna provision; special 3-pie I.F.'s with flat-top characteristics; statically-shielded power transformer; etc.

**MASSIVE NEW CONSOLE.** The console of the **1938 Knight 16** is magnificently designed and built. It uses four types of costly rich-figured walnut in a design that is sensibly conceived for perfect harmony in the home. The center is a one-piece burl walnut panel for tuning at a rolled top both front and rear panels. This center panel is bordered with a strip of imported oriental walnut; plasters are beautifully matted at top and continue around all depth of side. The entire console is hand-rubbed to a high piano finish. Size: 44" high, 14" deep, 26" wide.
